V(D)J recombinase mediates rearrangements is unaccombination signal sequences (cRSS), resulting in a variety of genomic rearrangements. V(D)J recombinase mediates rearrangements include deletions of up to 15 megabases. Using the H2D2 and H2D2-GFP homozygous 129/Sv-imprinted mouse crosses we have mapped deletions at the MHC locus to a 10- to 20-megabase region of proximal chrom
